### **DETAILED ACTION**

1. Claims 1-42 pending.

#### ***Response to Amendment***

2. The rejection of claims 1-8, 17, 20, 22, 25-26, 28, 30, 34, and 36-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crenshaw (US 5,861,044), and further in view of Bouwknecht et al. (US 4,859,207) is maintained for the reasons recited in the previous office action dated April 8, 2003 in paper no. 7.

3. Claims 21 and 35 are rejected under 35 U.S.C. 103(a) as unpatentable over Crenshaw and Bouwknecht et al. as applied to claims 1-8, 17, 20, 22, 25-26, 28, 30, 34, and 36-37 above and further, in view of Hauser et al. (US 5,667,533).

4. Claims 3,4,6,9,14,16,27,29 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crenshaw and Bouwknecht et al. as applied to claims 1-8, 17, 20, 22, 25-26, 28, 30, 34, and 36-37 above and further, in view of Egli et al. (US 3,743,477).

5. Claims 10-13, 15, 18-19, 23-24, 32-33, and 38-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crenshaw and Bouwknecht et al. as applied to claims 1-9, 14, 16-17, 20, 22, 25-31, 34, and 36-37 above, and further in view of Fadler nee Jack et al. (US 4,023,925).

#### ***Response to Arguments***

6. Applicant's arguments filed September 10, 2003 have been fully considered but they are not persuasive.

7. Regarding the rejection of Crenshaw in view of Bouwknecht et al., Applicant's urge that the prior art does not teach a patterned effect using a physical bonding

Art Unit: 1751

mechanism that prevent the treated region of the fabric from becoming fully saturated while exposing substantially the entire fabric to the dye. Instead the prior art teaches a chemical reaction to achieve the patterned effect. Regarding the rejection of Crenshaw and Bouwknecht et al. in view of Hauser et al., Applicants urge that Hauser et al. teach a chemical bonding to cellulosic fibers to create a heather appearance. Regarding the rejection of Crenshaw and Bouwknecht et al. in view of Fadler nee Jack et al., Applicants urge that Fadler nee Jack et al. do not teach a mechanical inhibition of dyes.

8. However, Applicant's have not disclosed what portion of the prior art (column, line #) is relied upon to come to the conclusion that the teachings in the prior art are chemical reactions and furthermore it is not seen how the instant claims are limited to only mechanical reactions or physical bonding reactions. Thus, Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

9. Specifically Regarding the rejection of Crenshaw and Bouwknecht et al. in view of Egli et al., Applicants argue hindsight reasoning. However, it is well within the skill of one of ordinary skill in the art, to utilize an alginate print paste and disperse dyes in the process taught by Crenshaw and Bouwknecht et al., because Egli et al. teach the utility of alginate print pastes and disperse dyes in the dyeing process and further, Crenshaw and Bouwknecht et al. teach the utility of various methods of dyeing in general.
